# Proportional Representation

Where party DEF wins 20% of the votes, party GHI 10%, parties JKL and MNO 5% each, and party ABC 60%, then their representation in Parliament would look something like this :

Party ABC would get 60% of the seats in Parliament, party DEF 20%, party GHI 10%, and parties JKL and MNO 5 % each. Out of 400 seats, that would mean ABC gets 240 seats, DEF 80, GHI 40, and JKL and MNO 20 seats each.
